Define methodology processes and steps

Define Methodology Processes and Steps

Use

In this Customizing activity, you define the methodology processes and steps for role maintenance. The application provides a set of actions that can be used for role maintenance, such as definition, generation, and so on. You can select which actions to use, the order, and the frequency. This is called your methodology. For example, you can define that six steps are required to maintain a role and that approval is required after each step.

Requirements

You have performed the Customizing activity

Assign Condition Groups to BRFplus Functions

Activities

Defining a methodology process consists of the following procedures:

1. Defining a step

SAP provides a set of actions that you can perform for role maintenance. When you define a step, you select which actions to use and assign a name that in line with your company guidelines. For example, you can select delivered action **Action and Permissions**, and name its phase as *Maintain Authorizations* per your company guidelines

2. Defining a methodology process

You create the methodology processes as a framework to attach the methodology steps. You can create as many methodology processes as you needed. For example, you may want to have one methodology for finance role requests, and another for office administration role requests.

3. Adding steps to the methodology process

You assign the steps to the methodology processes and select the order of the steps. For example, for finance role requests, you may want to require several approval steps and risk analysis.

To define a step, do the following:

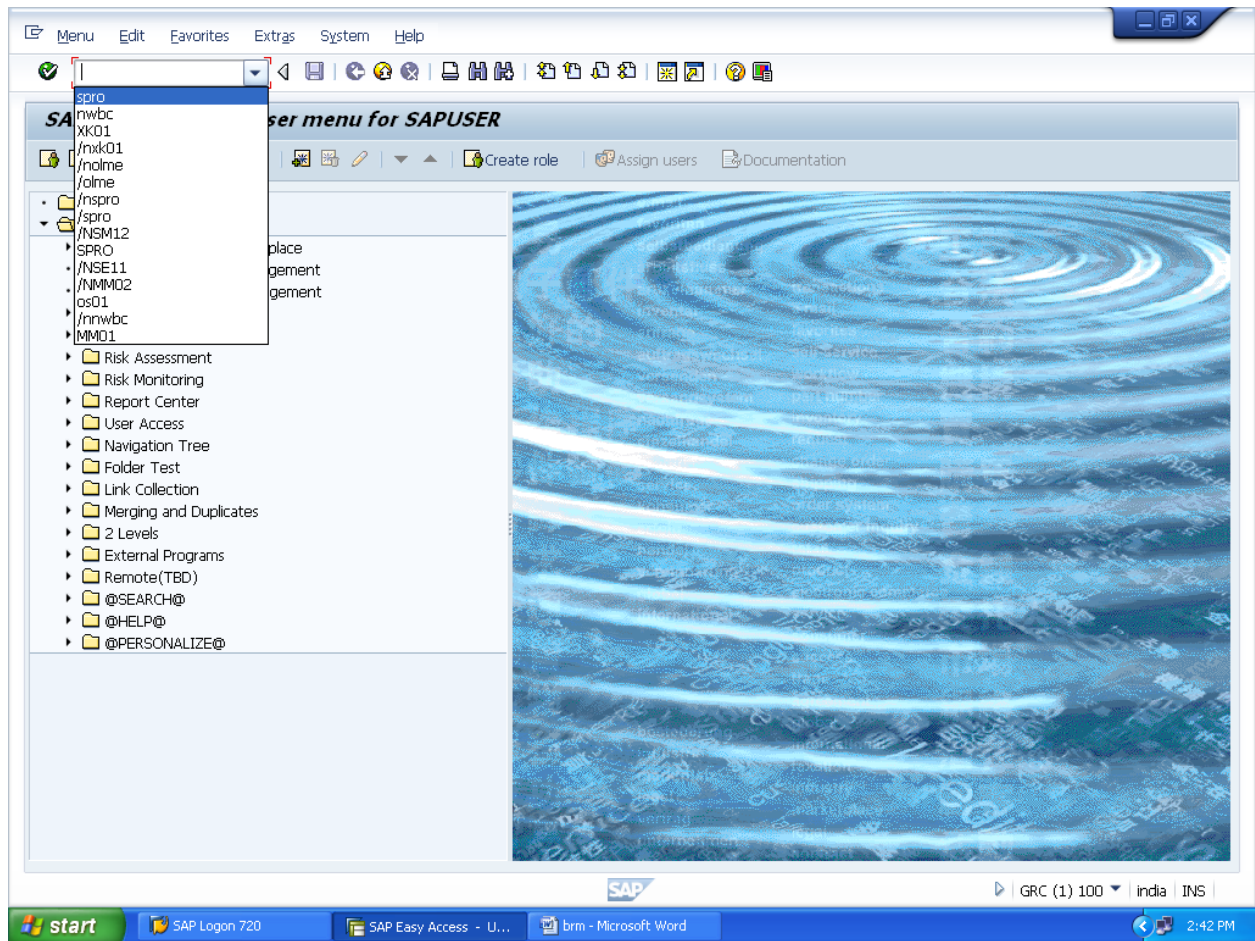

1. Double-click *Define Step*.
 2. Choose **New Entries**.
 3. In the *Step* field, enter a unique number to identify the step.
 4. In the *Actions* field, select an action from the dropdown list. The actions are delivered with the application.
- Note:** The **Provisioning** action is only applicable for business roles. It allows business roles to be reprovisioned when the associated technical roles are changed.
5. To set it as active, select the *Active* checkbox.
 6. In the *Phase* field, enter a name. This application displays the phase name in the front end.
 7. Save the entry.

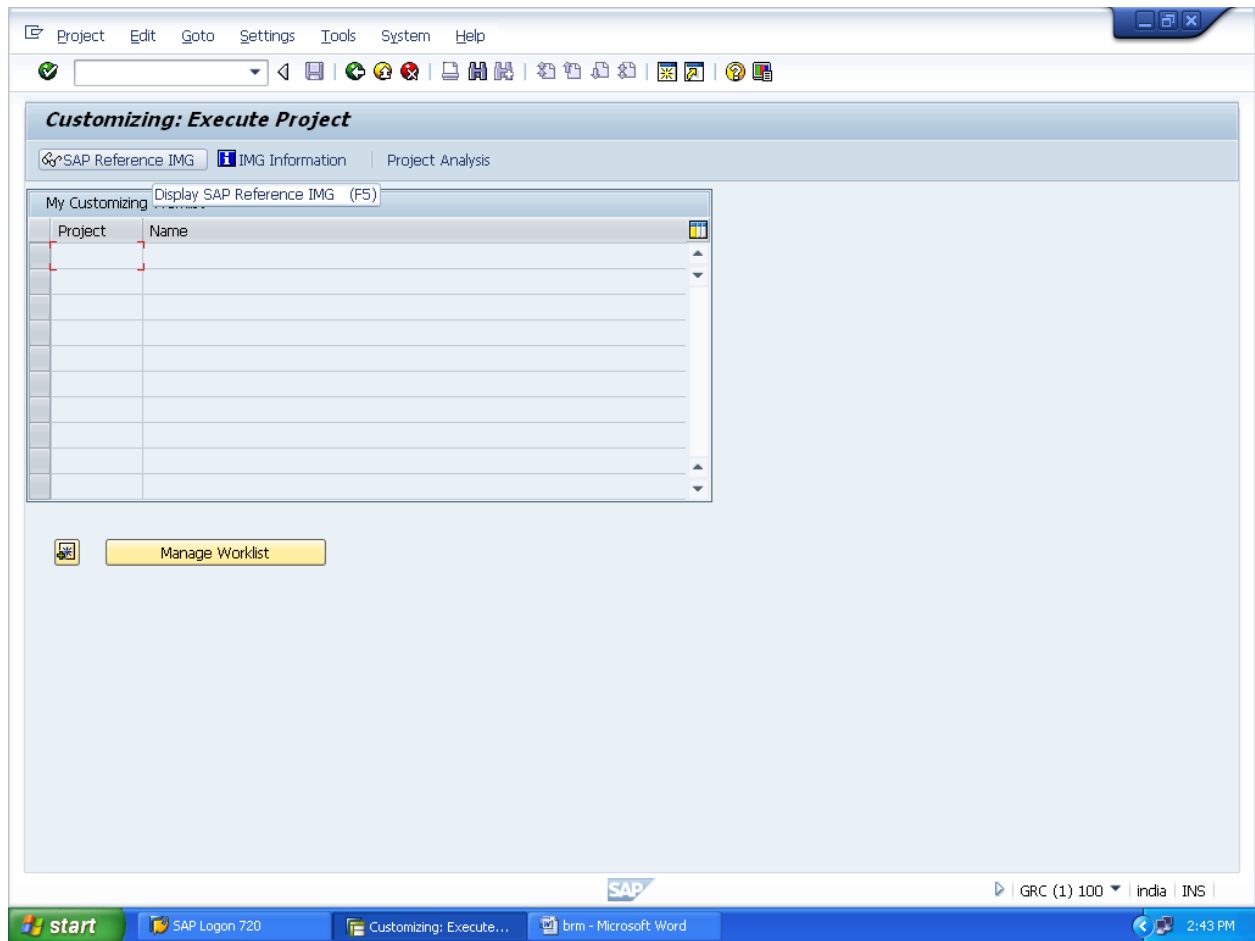

To define a methodology process, do the following:

1. Double-click **Methodology process**.
2. Choose **New Entries**.
3. In the *Methodology Process* field, enter a number.
4. To set the process as active, select the *Active* checkbox.
5. To set the process as the default methodology process, select the *Default* checkbox. The application uses this methodology process if the user does not specify a process. You can choose only one as the default.
6. Enter a description.
7. Save the entry.

To add steps to a methodology process, do the following:

1. Select a methodology process and double-click **Methodology Process Step**.
2. Choose **New Entries**.
3. In the *Step Sequence* field, enter a number. This is the order for the step.
4. Select a step from the *Step* dropdown list. The step is mapped to a phase and action.
5. Press **Enter**. The application updates the **Step** number and enters the phase in the **Action** column.
6. Save the entry.

The screenshot displays the SAP Change View for 'Methodology Process Step'. The interface includes a menu bar at the top with options like Table View, Edit, Goto, Selection, Utilities(M), System, and Help. Below the menu is a toolbar with various icons. The main title bar reads 'Change View "Methodology Process Step": Overview'. Underneath, there are buttons for 'New Entries' and 'BC Set: Change Field Values'. On the left, a 'Dialog Structure' pane shows a tree view with 'Define Step' and 'Define Methodology Process', with 'Methodology Process Step' selected. The central area features a table titled 'Methodology Process Step' with columns 'Step Sequence', 'Step', and 'Action'. The table is currently empty. At the bottom, a status bar indicates 'No entries found that match selection criteria'. The SAP logo is visible in the bottom right corner of the window.
